

Optimize Operations with Mobile CMMS

Recognizing the powerful operational efficiencies, mobile devices are becoming commonplace in today's maintenance operations.

Update data in real time

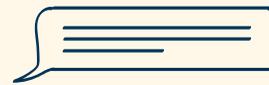

A CMMS mobile app, like those offered by Brightly Software, takes advantage of the devices in your employees' pockets to put the information they need in their hands.

Improve Accuracy

Increase Efficiency

Enhance Communications

Direct image upload

Use your phone's camera to upload images, add PDF diagrams and more

Offline capabilities

View or edit work orders while offline, then sync with your main database when back online

Time tracking

Capture actual labor data as work occurs by tracking your time spent on the job

Geo-tagging

Visually map out your work orders, assets and parts both individually and in groups

Work on the go

Complete work orders, perform inventory duties and check your current storage from the field

QR code scanning

Pull up work orders, asset history, inventory details, and more with QR codes
