

Client Success Story

Powerful project management to ensures systems alignment, cultural change and community outcomes

Client

Jean-Pierre Koekemoer,
Manager, Infrastructure
Management & Governance

Geography

Adelaide, Australia

Vitals

- AUD\$2 billion: Asset Portfolio Value (replacement cost)
- \$43 million p/a: Capital works program
- 24,000 / 300,000+: Population / Daily visitors
- Aging infrastructure: Ranging from heritage to latest-tech IoT
- Complex environment: Complex social, political, and legislative environment

Challenges

Team recognised a desperate need to modernise – processes and practices were sub-par, and true transformation was required

Results

Significant wins in its transformation, reported and communicated across the organisation

The Challenge & Opportunity

City of Adelaide (CoA) is the local government area of the capital city of South Australia, Adelaide. In 2018 the asset management team recognised a desperate need to modernise – processes and practices were sub-par, and true transformation was required.

At the outset the team was under significant pressure to transform its approach, due to:

- **Asset management audit:** revealed that despite best efforts the City was behind industry standard
- **Organisational Strategic Risk Committee:** in line with ISO 31000 identified four extreme and five high risk areas
- **Staff survey:** found cultural disempowerment

When COVID-19 hit in 2020 further pressures were added to the mix whilst implementation was in flight, further amplifying the need for transformation. There were significant financial impacts, with 60-70% of CoA's income coming from commercial operations in the city. Subsequently the executive team was tasked with cutting \$20M from the operational budget, forcing all spending decisions under the limelight. The internal stakeholder environment was also thrown into flux, with little surety around where accountability fell moving forward.

The Approach

While many organisations approach an asset management implementation as part of their day-to-day CoA was fortunate to be able to treat transformation as a dedicated project, leveraging expert project management engaging specialist firm Chamonix. While key CoA staff continued their essential work, Chamonix specialists in change management, systems alignment and other areas were brought in as required to ensure success.

CoA's approach ensured clear strategic planning from the outset, and a commitment to phased measurement. As a result defined business enablers and community outcomes were delivered efficiently and incrementally, rather than stalling when challenges arose.

Detailed Results

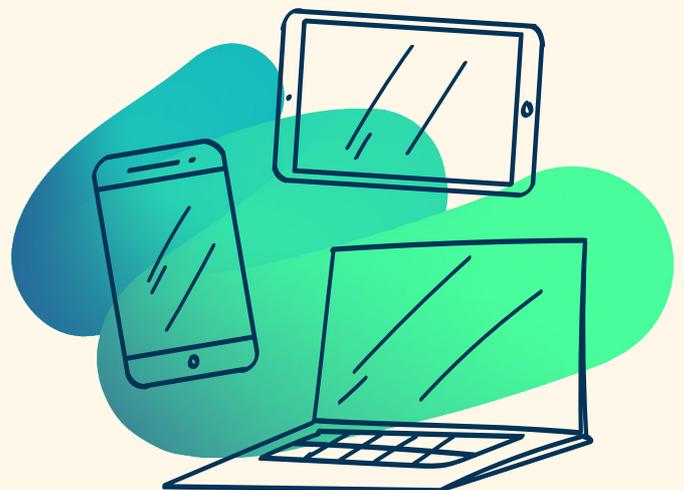

In just under 12 months CoA has achieved significant wins in its transformation, reported and communicated across the organisation.

Strategic Impacts

- Merging of multiple platforms to an aligned enterprise architecture
- Preliminary life-cycle modelling outcomes enabling more informed decision making
- Significant minimisation of financial and audit risk exposure

Operational Impacts

- Full systems upgrade to support ongoing processing and reporting requirements
- Manual and ad-hoc processing via spreadsheets eliminated
- Disparate and inconsistent asset registers merged
- Alignment of operating processes with strategic decision-making, thanks to improved staff knowledge-transfer and training
- Shift from age-based to condition-based renewals
- Shift from reactive to planned maintenance
- Closed customer complaint feedback loop, visible to all stakeholders

City of Adelaide & Brightly

CoA partnered with Brightly on its asset management transformation program in late 2019, to further-improve its approach to sustainable infrastructure management. “This was about transformation for the City of Adelaide, rather than just an asset system rollout – we were looking for an organisation we could work with as partners. Brightly offers the specialist knowledge to understand our problem and provide a solution that was more than just a system.” Jean-Pierre Koekemoer, Manager, Infrastructure Management & Governance at CoA said.

Thanks to the strategic approach of this transformation the behemoth challenges of 2020 remained manageable, minimising decision paralysis and ensuring community service level improvements continued to be delivered. Processes and systems implemented provide the ability to see future choices, and levers to alter what CoA’s future will look like for the better of the organisation and the community.
