

AI not living up to expectations?

Improved data quality gets work done faster

Why Brightly?

20+

years historical data

400

million work orders addressed

49

million assets logged

97%

client satisfaction rating

Now a Siemens company

Solutions

AI-embedded asset management

Flagged duplicate work orders, maintenance history summaries, task-specific guidance, spare parts recommendation

Workflow management

Location- and asset-based work orders, job planners, PM calendar scheduling

Inventory management

Just-in-time parts inventory, advanced procurement

Mobile app

Powered with optical character recognition (OCR), setting up assets 75% faster

Enriched asset data

Structured, model-specific equipment data integrated into your CMMS

Data integrations

Vertically tailored integrations, from out-of-the-box to custom

AI doesn't create value. The data behind it does.

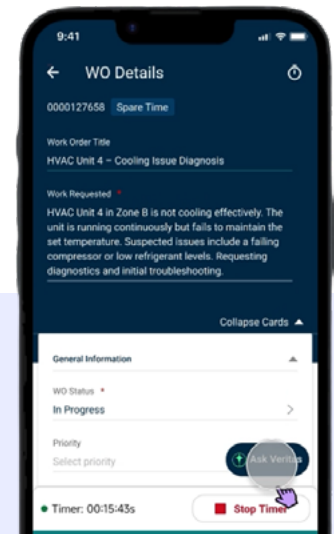

Every decision depends on data created in the middle of real work. When work orders are incomplete, or if key data live in silos, the cost shows up in real ways: extra clicks, repeat work, missed issues, and slower decisions. Brightly Software is here and ready to provide you with the sharp tools for easier, faster work.

AI-embedded Asset Essentials

Interwoven with AI and Maintenance Copilot functionality, Asset Essentials serves as the primary conduit to leverage AI within facilities and operations — streamlining workflows and enhancing decision making. By deduplicating work orders, automatically summarizing work orders and histories, and recommending parts, technicians can have the right information at their fingertips to get the job done right faster.

Dynamic Data

Rapidly builds reliable foundational asset data, moving organizations from manual to real-time machine-readable data capture. Technicians get accurate, complete data, focusing them on repairs, not paperwork.

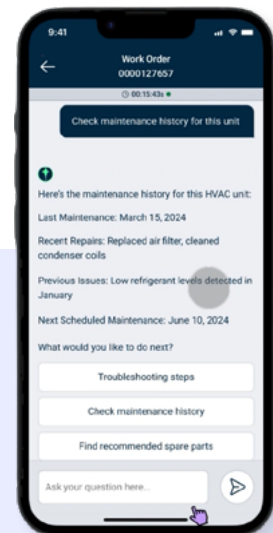

Brightly Data Share

Acting as the “digital fabric” that weaves together siloed systems like finance, HR, and building management systems, Brightly Data Share ensures that data flows seamlessly across the enterprise into your corporate BI tools. This creates a unified, holistic view of operations, and turns that operational data into your strongest strategic asset yet.

Data Integrations

What value is there in quality facility and operations data if it doesn't integrate with key business systems across the enterprise? Brightly offers out-of-the-box and custom integrations for key business needs, allowing valuable operational and maintenance data to serve as the foundation for critical, smarter decisions across the organization.

About Brightly Software

Brightly, a Siemens company, enables organizations to transform the performance of their assets. The global leader in intelligent asset management solutions, Brightly's sophisticated cloud-based platform leverages more than 20 years of data to deliver predictive insights that help users through the key phases of the entire asset lifecycle. More than 12,000 customers of every size worldwide depend on Brightly's complete suite of intuitive software including CMMS, EAM, Strategic Asset Management, IoT Remote Monitoring, Sustainability and Community Engagement. Paired with award-winning training, support and consulting services, Brightly helps light the way to a bright future with smarter assets and sustainable communities.
